Subj: Rethink Robotics internship position

**Dear Hiring Manager:**

I am a senior in engineering, mechanical specialty, at the Colorado School of Mines, with minors in computer science and economics. Outside of school I've had a six year interest in programming, especially regarding web development. I am looking to merge my formal engineering education and my extracurricular programming together into my real passion, robotics.

Some relevant experiences from my background include:

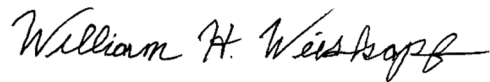

- A year and a half working as a network administration intern with Air Sciences.
- Participation in the NASA Lunabotics 2013 robotics competition with my senior design team.
- Independent private website development of [birkindustrieshome.com](http://birkindustrieshome.com), [dnrdenver.com](http://dnrdenver.com), [william.weiskopf.me](http://william.weiskopf.me), [arvadatroop21.info](http://arvadatroop21.info)

I am seeking an internship for this summer 2013, with the possibility of continuing through December 2013. Looking at your current internship openings, both asking for computer science majors, I understand that I don't strictly match your requirements, though I have a computer science background and am very willing to learn. My other interests include systems integration, controls, and robot perception. I am available starting in May and continuing through December 2013. Please consider me for the Software Engineering and User Interface internships, or another area where you find an intern is applicable.

My included resume gives additional details about my background.

Thank you for your consideration.

**Sincerely,**

**William Harvard Weiskopf, IV**
