Subj: Manufacturing engineering internship position

Dear Hiring Manager:

I am a senior in engineering, mechanical specialty, at the Colorado School of Mines, with minors in computer science and economics. Outside of school, I've had a six year interest in programming, especially regarding web development and robotics. I am looking to advance my engineering experience this summer.

Some relevant experiences from my background include:

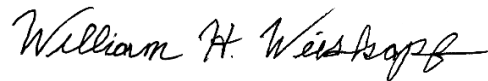

- Design and participation in the NASA Lunabotics 2013 robotics competition with my senior design team. CAD modeling of the robot.
- A year and a half working as a network administration intern with Air Sciences, Inc.

I am seeking an internship for this summer, 2013. I saw your opening for a manufacturing engineering intern on the CSM job posting site. I believe my experience with SolidWorks in designing parts for our robot this year, in addition to the coursework of at least five classes, will complement your goals well. My experience with Air Sciences has provided me project and documentation skills. I have a special interest in the design portion of the internship that you outlined.

My included resume gives additional details about my background.

Thank you for your consideration.

Sincerely,

William Harvard Weiskopf, IV
