Subj: Engineering internship position

**Dear Hiring Manager:**

I am a senior in engineering, mechanical specialty, at the Colorado School of Mines, with minors in computer science and economics. Outside of school, I've had a six year interest in programming, especially regarding web development and robotics. I am looking to advance my engineering experience this summer.

Some relevant experiences from my background include:

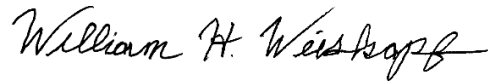

- A year and a half working as a network administration intern with Air Sciences, Inc.
- Design and participation in the NASA Lunabotics 2013 robotics competition with my senior design team.
- Experience as a data entry specialist with the CSM Alumni Association.
- Independent private website development of [birkindustrieshome.com](http://birkindustrieshome.com), [dnrdenver.com](http://dnrdenver.com), [william.weiskopf.me](http://william.weiskopf.me), [arvadatroop21.info](http://arvadatroop21.info)

I am seeking an internship for this summer, 2013. I saw your opening for an engineering intern on the CSM job posting site. I believe my experience with computers, data, and networks will complement your operation. After my robotics project this past semester, I've had an interest in sensors and instrumentation.

My included resume gives additional details about my background.

Thank you for your consideration.

Sincerely,

William Harvard Weiskopf, IV
